What is RPET?

RPET is the abbreviation for recycled polyethylene terephthalate (PET). PET is used in everything from food packaging to clothing. Its durable properties mean it can take up to 700 years to breakdown if it ends up in landfill.

RPET takes plastic that has already been produced and cuts it into tiny flakes which are then melted to extract the core PET. This core PET can be reused to make more bottles or almost anything. RPET uses up to 50% less energy than making virgin PET and prevents existing plastic heading to landfill.

Our bags have saved 3 bottles from landfill and retain the beneficial characteristics of PET being both lightweight and durable, whilst helping us reduce plastic consumption.

Shield/Shield mini bags

The water resistant and hard wearing RPET outer lining ensures your laptop/Chromebook is fully protected at all times. Inside is a deep, faux fur pocket which fits laptops up to 15"6 (Shield)/Chromebooks (Shield mini). Shield bags feature two secure zipped outer pockets and a retractable, waterproof TPU handle.

Shield laptop bag > and laptop

∨ Retractable, waterproof TPU handle

Colour:	black
Dimensions:	300 x 425 x 30mm (Shield) 245 x 335 x 30mm (Shield mini)
