

sustainability without compromise

Protecting our planet for future generations is our shared responsibility

Our range of reusable drinkware encourages us to effortlessly change our habits. Simple lifestyle choices can have a positive impact on our world. The sustainable materials used in our drinkware range have been carefully selected to reduce the impact on our environment whilst not compromising on quality. Our products are made from sustainable materials and are made with durability and longevity in mind.

Less waste better taste

In an ideal world single use items wouldn't exist and the focus would be solely on reusing but that's not always realistic. By promoting reusable, quality items that can be used again and again we can reduce both long term costs and waste.

Materials that matter

Stainless steel

All our insulated bottles are made from premium grade 18/8 stainless steel. Stainless steel is not only extremely durable it offers unprecedented hygienic properties. Stainless steel is used within the food and medical industry as it is easy to clean and is entirely non-absorbent meaning bottles remain odourless and germ free.

Thanks to the longevity of our stainless steel bottles they have a significantly better CO₂ balance than disposable PET bottles. The properties of stainless steel mean it is meant to last but when your bottle does reach the end of its life it can be recycled.

Glass

Glass is a fully recyclable material that can be recycled over and over again. This is particularly true for glass bottles and mugs which on average have a recycling rate varying from 50% to 80%. Thanks to glass recycling, significant amounts of raw materials are saved, and natural resources are preserved.

Glass is sustainable from its origin to its demise. Manufactured from abundant natural raw materials, such as sand, creating glass does not require disturbing the natural environment or cause negative feedback. Glass is 100% recyclable making it a sustainable choice that can close the consumption loop.

When glass is recycled, it remains safe and stable, and releases no harmful chemicals into the soil. So even when glass isn't recycled, it does minimal harm to the environment.

Glass bottles are good for both you and the environment. Glass is food safe, resistant to odours and discoloration and free from harmful pollutants such as estrogen-active substances, BPA and phthalates.

Our Café and Milan insulated cups are both manufactured from heat-resistant borosilicate glass. Borosilicate glass is durable, impact-resistant, and easy to clean making it safe to use for years.

Tritan

Tritan has the crystal-clear, appearance of glass with the added benefit of being lightweight and shatterproof. Tritan is a patented plastic material developed specifically to be free from harmful pollutants such as estrogen-active substances and phthalates whilst retaining its durability and glass-like properties. Tritan offers a practical, odourless alternative to single use plastics that is recyclable.

Packaging with principles

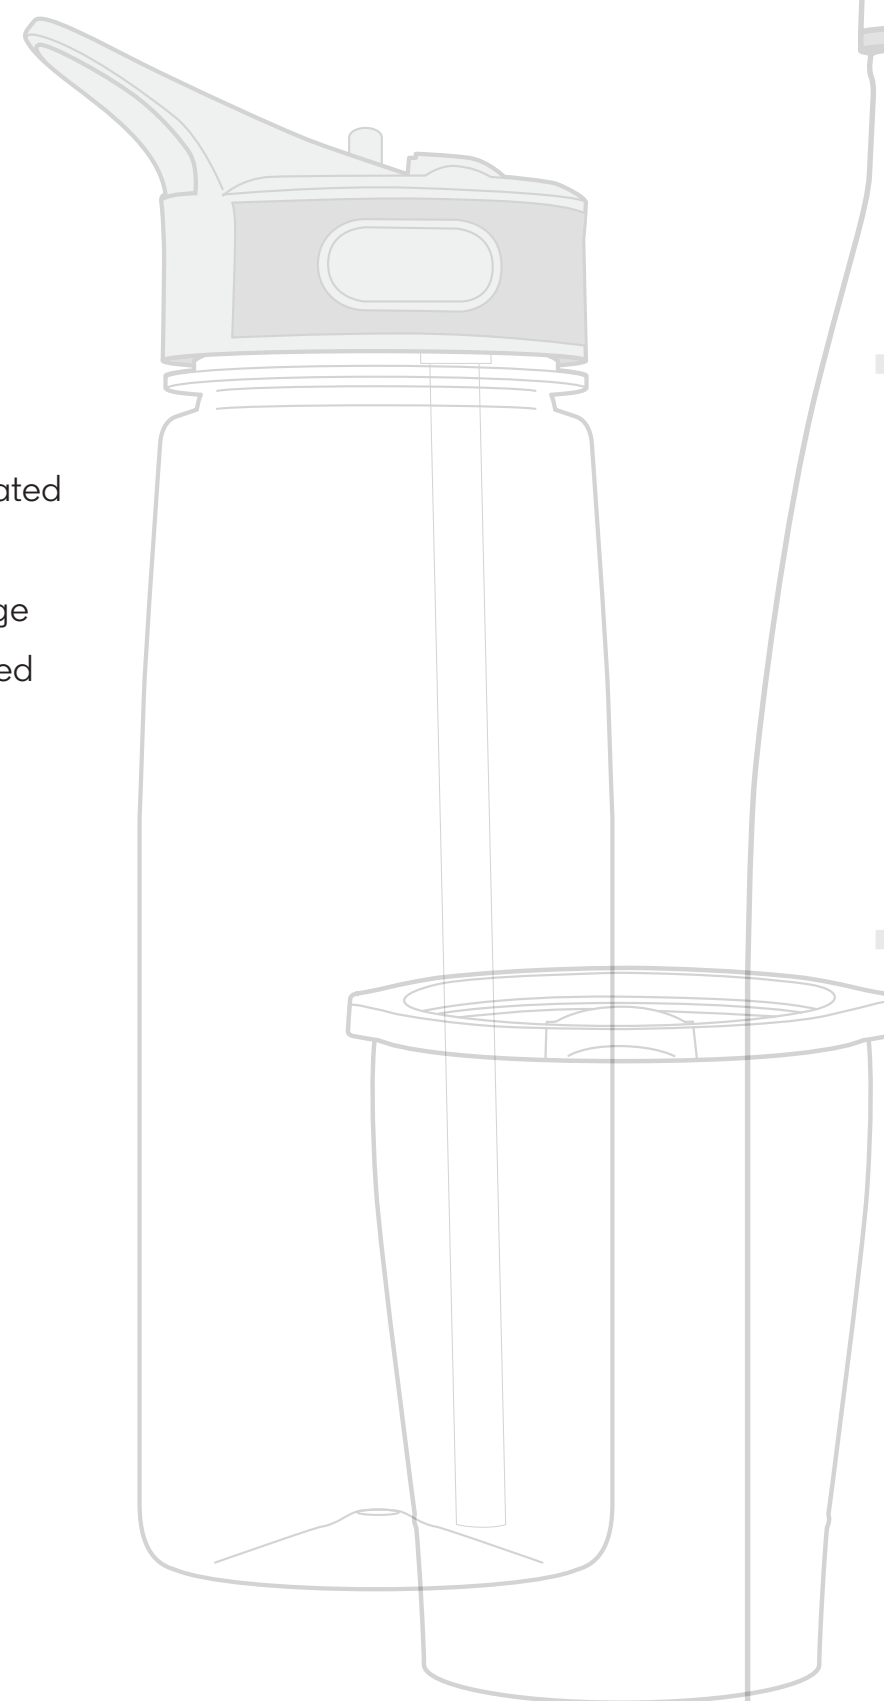

Our products are only part of the story. As suppliers we are always looking at ways to deliver our products with minimal impact on our environment. That's why our bottles are supplied in protective, biodegradable, corn-starch liners and FSC certified boxes produced from FSC managed woodland.

It's not just our bottles we're committed to protecting.
